

SINEAX TV 808, 2 channels

Isolating amplifier unipolar/bipolar

For electrically insulating, amplifying and converting DC signals

Application

The purpose of the isolating amplifier **SINEAX TV 808** (Fig. 1) is to electrically insulate input and output signals, respectively to amplify and/or change the signal level or type (current or voltage) of the input signals.

The amplifier fulfils all the important requirements and regulations concerning electromagnetic compatibility EMC and Safety (IEC 1010 resp. EN 61 010). It was developed and is manufactured and tested in strict accordance with the quality assurance standard ISO 9001.

The device has two channels and provides two independent isolating amplifiers in an extremely small space. The user has a wide choice of input and output ranges and can set the desired one with the aid of soldered jumpers and potentiometers.

A version with one input and two outputs is available that enables two electrically insulated outputs to be obtained from a single input signal.

Fig. 1. Isolating amplifier SINEAX TV 808-12 in housing S17 clipped onto a top-hat rail or screw hole mounting brackets pulled out.

Variants

- 252 standard input and output combinations selected by soldered jumpers
- User-specific input and/or output ranges
- Isolating amplifier with one input and two electrically insulated outputs
- Power supply 24...60 V DC/AC or 85...230 V DC/AC

Please request our data sheet TV 808-11 Le for single-channel versions.

Features / Benefits

- Electric insulation between inputs, outputs (2.3 kV) and power supply (3.7 kV) / Prevents measurement errors due to potential leakage
- Flexibility provided by more than 250 different input and output combinations selected by simply positioning soldered jumpers / Reduced stocking
- Non-standard user-specific ranges available
- AC/DC power supply / Universal
- Provision for either snapping the isolating amplifier onto top-hat rails or securing it with screws to a wall or panel
- Housing only 17.5 mm (size S17 housing) / Low space requirement

Standard versions

Inputs and outputs set to 0...20 mA. Any of the standard ranges given in the Section "Technical data, measuring inputs" are simply selected by positioning soldered jumpers. The fine adjustment is accomplished using the potentiometers "Zero" and "Span".

Configuration

1. Standard input ranges

Soldered jumpers are provided for the coarse setting of the input ranges and the fine adjustment is accomplished using the potentiometers "Zero" and "Span".

100 must be added to the designations of the soldered jumpers in the table for channel 1 and 200 for channel 2.

(Example: Input range for input 1 and input 2 = 0...20 mA. Jumpers 1, 5, 6 and 11 must be inserted for this range.

- The corresponding jumpers for channel 1 are B 101, B 105, B 106 and B 111.
- The corresponding jumpers for channel 2 are B 201, B 205, B 206 and B 211).
