

AGL SERIES

Large Aperture Ground Fault Relay

AGL Series Large Aperture Ground Fault Relays offer one of the largest aperture diameters in the industry while maintaining a compact overall profile. Intended for sensing earth leakage in applications up to 300 A, the AGL Series offers a choice of N.O. or N.C. latching relays or an SPDT Form C relay with auto-reset. Case features integral DIN rail mounting as standard and optional noise immunity coatings for applications in harsh EMI/RFI environments.

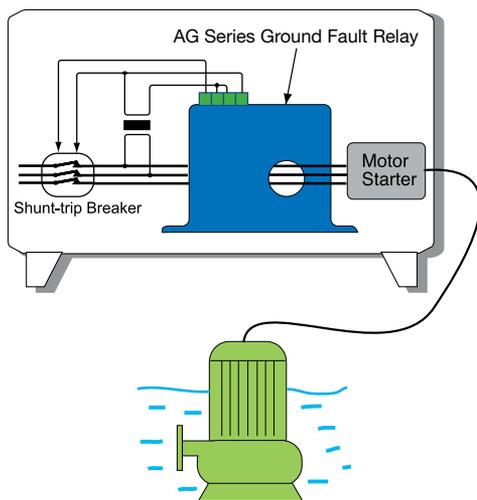

Ground Fault Protection

Ground Fault Relay Applications

- Replace bulky two-piece sensor solutions which require separate CTs or relay modules.
- Use with shunt trip breakers to provide total ground fault protection to sensitive machine electronics.
- Detect ground faults in resistance/impedance heating, industrial automation and control, theatrical lighting, portable power distribution, and snow melt/heat trace applications.
- Sense progressive levels of ground fault in motors or heating systems to detect deterioration prior to catastrophic failure.

Ground Fault Relay Features

- Integral DIN rail mount with spring loaded mounting clips.*
- Setpoint options include factory-adjustable setpoint from 5 mA – 100 mA or “TR3 Tri-Set” models with field-selectable 5/10/30 mA settings.
- Finger-safe terminals for worry-free installation and operation.
- Aperture orientation is perpendicular to DIN rail, allowing for clean and efficient wiring and minimizing space between multiple components.
- Choice of dependable latching SPST or SPDT (form C) electromechanical relay outputs.
- Uses “Zero Sum” operating principle to reliably sense imbalance in magnetic fields associated with current leakage to ground.
- Typical response times from 15 ms to 200 ms.
- Integral “push-to-test” button with LED indication of contact status.
- UL/cUL and CE Approved. Accepted worldwide.
