

DT SERIES, 3-WIRE

DC Current Transducers

DT Series DC Current Transducers provide a low cost way of measuring DC current in a small and easy-to-install case. The series is stable at a wide range of temperatures. The single range design and the use of a common for the power supply and output signal provide a price competitive option in an international market. Similar in concept to the DLT current output sensors, this design produces a choice of 0–5 or 0–10 VDC to interface with controllers or data acquisition systems lacking the current signal capacity.

DC Current Transducer Applications

Photovoltaic Panel Monitoring

- Accurate and reliable indication of how much power is produced by a single panel or a string of panels.

Hoists

- Detect overloads and jams.
- Detect undercurrent conditions from coupling slip or breakage.

DC Motor Protection

- Detect imminent bearing failures.

Wind Driven Generators

- Measure and monitor power production from alternative sources.
